Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 24-33, drawn to a method for regenerating a water softener, classified in class 521, subclass 26.
- II. Claims 13-23, drawn to a water softener, classified in class 210, subclass 190.

The inventions are distinct, each from the other because:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process (MPEP § 806.05(e)). In this case the apparatus of Group II could be regenerated in another manner, different from that of Group I. For example, this device could be regenerated with more than just two different salt types (see claim 1, lines 3-4, 9 and 13; and claim 13, line 6). Also, the means for calculating and measuring the quantity of water to be used to form the brine in the device of Group II (see claim 13, lines 7-8) does not require that this determination be based on the solubility of the salt selected, as in the process of Group I (see claim 1, lines 9-10 and 14-15); and instead could be based

upon the desired volume and/or concentration of the brine solution.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
